MOLD-, MOISTURE- AND FIRE-RESISTANT DRYWALL (TREATED CORE)

MOLD DEFENSE®

Type X

Continental Building Products Mold Defense Type X is a gypsum board enhanced with glass fibers to offer greater strength and fire protection for interior walls and ceilings, protected exterior soffit applications, and enhanced protection against mold and mildew that can cause deterioration and/or stains. It contains a non-combustible, mold-, mildew- and moisture-treated gypsum core with treated paper facings on the front (green), back and long edges. This product will accommodate a variety of decorative treatments after proper surface preparation.

Mold Defense Type X is moisture-resistant and can be used in tile backer applications in dry areas or in areas where a degree of moisture may be expected, such as bathrooms and laundry rooms (not for use in shower and bathtub areas). It can be used in building applications that require direct mechanical attachment to wood or metal wall and ceiling frames, or attachment to existing surfaces using fasteners or adhesives. It may also be used as a thermal barrier in roof assemblies when specified by the roofing manufacturer.

To ensure optimum Type X fire resistance performance, follow recommended installation procedures for fire-rated assemblies. When used in a certified sound-rated assembly, Mold Defense Type X will also contribute to required sound transmission classification (STC) values.

Continental's Mold Defense products are compliant with the treated article exemption of FIFRA as determined by the U.S. Environmental Protection Agency (EPA). Mold Defense offers enhanced protection against the growth of mold and mildew compared to ordinary drywall products. Under controlled testing conditions, Mold Defense achieved an average panel score of 10 out of a possible 10 using ASTM D3273.*

Note: Mold Defense Type X is suitable for interior walls and ceilings and protected exterior soffit applications only, and should not be used where temperatures exceed 125°F for extended periods or in areas of extreme humidity. Likewise, the board should be protected from exposure to adverse conditions during storage and construction.

Mold Defense Type X is not for use as a tile backer in shower, tub and other wet areas. It may be used as a tile backer in dry areas.
Sustainability

Can contribute to the U.S. Green Building Council's LEED Credit Qualification in several credit categories to assist in obtaining LEED certification.

Physical Characteristics

Core: Non-combustible, dimensionally stable, inert gypsum enhanced with glass fibers for strength and fire resistance, a moisture-resistant wax emulsion, and chemically treated to resist mold and mildew in the core

Paper: 100% recycled; Chemically treated to resist mold and mildew on the surface; Front and edges = green, back = gray

Long Edges: Tapered

Standards and Codes

Manufactured to meet ASTM C1396/C1396M, Section 7, Water-Resistant Gypsum Backing Board, Type X; ASTM C1396/C1396M, Section 8.1.2 Humidified Deflection; Mold Resistant per ASTM D3273; and CAN/CSA-A82.27-M, Type X.

Technical Specifications

UL classified for surface burning (File No. R16102) (per ASTM E84 and CAN/ULC-S102) Flame spread = 0; Smoke developed = 0; Meeting IBC, Section 803.1, Class A

Core combustibility (per ASTM E136) Non-combustible

UL classified for fire resistance (File No. R18482) as Type LGFC2A per ASTM E119 and CAN/ULC-S101

Mold and mildew resistant (10 out of 10 score, ASTM D3273)*

Installation

Install according to Gypsum Association GA-201, GA-216, or ASTM C840. For fire-rated construction, consult GA-600 Fire Resistance Design Manual and UL Fire Resistance Directory. Refer to GA-214 for finishing recommendations. Use of drying- or setting-type compounds is recommended.

Painting and Decorating

For best results, a good gypsum board primer should be applied in accordance with manufacturer’s instructions before painting or before any textured material is applied.

Handling Recommendations

Stack flat, keep dry and lift (do not drag) to avoid scuffing. Avoid damage to edges. For detailed recommendations, refer to GA-216, GA-238 and GA-801.

Safety Precautions

Wear safety glasses and NIOSH-approved respirators during cutting, breaking, rasping or other dust-producing activities.

Safety Data Sheets (SDS) are available for all Continental products upon request.

Asbestos free and GREENGUARD certified

*Mold Defense provides extra resistance against the formation of mold, but no product may be considered “mold proof.” The most effective way to avoid the formation of mold and mildew in drywall products is to limit or avoid water exposure during storage and construction, and after construction is complete. Used in combination with appropriate design, handling, construction and installation practices, Mold Defense drywall can provide increased mold and mildew resistance on its surface and in its core. ASTM D3273 is the “Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber” and is performed under controlled, laboratory conditions. Actual storage, handling, construction and installation conditions may vary from the environment created in the independent lab, and the use of the product in actual conditions may not replicate the ASTM results.

Can contribute to the U.S. Green Building Council’s LEED Credit Qualification in several credit categories to assist in obtaining LEED certification.
